1 INTRODUCTION

Shannon & Wilson, Inc. has prepared this report to summarize the November 2021 soil and asphalt sampling associated with upcoming construction activities at the Kodiak Benny Benson State Airport (ADQ) in Kodiak Alaska (Figure 1).

This report was prepared for the Alaska Department of Transportation and Public Facilities (DOT&PF) in accordance with the terms and conditions of our contract, relevant Alaska Department of Environmental Conservation (DEC) guidance documents, and 18 Alaska Administrative Code (AAC) 75.335.

1.1 Purpose and Objectives

The purpose of the project was to sample soil and asphalt in areas where construction activities will occur and where potentially contaminated material will be stockpiled. The objective of the sampling effort was to characterize existing material at the site to guide management of contaminated media during construction.

1.2 Background

The ADQ is located on the northeast side of Kodiak Island, south of Buskin River, and adjacent to the Kodiak U.S. Coast Guard (USCG) base. The ADQ is used by the public and military and operated by the State of Alaska.

We understand that DOT&PF is preparing for a perimeter fencing upgrades project at the ADQ. The fencing upgrades requires removal of soil and asphalt from areas with potential to be contaminated by per- and polyfluoroalkyl substances (PFAS) and other contaminants. We understand the excavated material will be stockpiled in two locations (Figure 1).

Exhibit 1-1: ADQ runway and taxiway, facing south.

1.3 Site History

Site 35 is an active DEC Contaminated Site (DEC File Number 2601.38.073, Hazard ID 2898) due to the presence of contaminants related to fire training activities for the USCG (Figures 1 and 4). The Site 35 fire training area has been filled with approximately 10 feet of overburden since excavation and remediation activities occurred in 2001. PFAS, diesel range

organics (DRO), gasoline range organics (GRO), and multiple volatile organic compounds (VOCs) have been detected in the soil and groundwater within the Site 35 vicinity.

DOT&PF has designated two areas where excavated soil and asphalt will be stockpiled during construction activities. The location of the future stockpile areas is used to practice gravel road re-surfacing, per conversations field staff had with DOT&PF personnel. It is unknown if there have been any releases in this area.

1.4 Contaminants of Potential Concern and Action Levels

The primary contaminants of potential concern (COPCs) are PFAS, specifically perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA). We requested 18 PFAS analytes be analyzed for the project samples; however, only PFOS and PFOA are currently regulated with established DEC cleanup levels. We have also included DRO, GRO, and VOCs as COPCs, as these compounds have been previously detected at Site 35.

We compared soil and asphalt results to the migration to groundwater cleanup levels listed in 18 AAC 75 *Table B1. Method Two- Soil Cleanup Levels and Table B2. Method Two- Petroleum Hydrocarbon Soil Cleanup Levels- Over 40-inch Zone.*

1.5 Scope of Services

The scope of services discussed in this report includes the implementation of work summarized in our September 3, 2021 proposal.

These activities included:

- collection of 15 primary and 2 field-duplicate samples from Site 35 for analysis of PFAS, GRO, DRO, and VOCs;
- collection of up to 11 primary and 6 replicate samples using Incremental Sampling Methodology (ISM) at future contaminated media stockpile locations for analysis of PFAS, GRO, DRO, and VOCs;
- collection of 13 primary and two field-duplicate asphalt-composite samples for analysis of PFAS;
- laboratory analysis for the above-listed samples; and
- evaluation and reporting of the analytical data.

This report was prepared for DOT&PF and its representatives. This work presents our professional judgement as to the conditions of the site. Information presented here is based on the sampling and analyses we performed. This report should not be used for other purposes without our approval or if any of the following occurs:

- Project details change, or new information becomes available, such as revised regulatory levels or the discovery of additional source areas.
- Conditions change due to natural forces or human activity at, under, or adjacent to the project site.
- Assumptions stated in this report have changed.
- If the site ownership or land use has changed.
- Regulations, laws, or cleanup levels change.
- If the site's regulatory status has changed.

If any of these occur, we should be retained to review the applicability of our recommendations. This report should not be used for other purposes without Shannon & Wilson's review. If a service is not specifically indicated in this report, do not assume it was performed.

2 FIELD ACTIVITIES

This section summarizes the soil and asphalt sampling field activities performed in November 2021. The following Shannon & Wilson staff collected analytical samples and are State of Alaska Qualified Samplers, per 18 AAC 7.5333[b] and 18 AAC 78.088[b].

- Rachel Willis, Environmental Scientist
- Zachary Thon, Environmental Scientist

Field staff are aware of the potential for cross-contamination of PFAS from numerous everyday items. Appropriate precautions were taken to prevent cross-contamination, including discontinuing the use of personal protection equipment and field supplies known to contain PFAS, hand washing, and donning a fresh pair of disposal nitrile gloves before each sample is collected.

Field forms are included in Appendix A.

Sampling locations and ISM boundaries are included in Figures 2 through 5.

Exhibit 2-1: Field staff use a rotary drill to sample the asphalt profile outside the Alaska Air Cargo building at the ADQ.

2.1 Asphalt Sampling

Shannon & Wilson collected 13 primary and two field-duplicate asphalt samples on November 13 and November 14, 2021. Sampling locations are presented in Figures 2 and 3.

Field staff used a Bosch Rotary Impact drill with a 1-inch diameter auger bit to drill two adjacent holes through the asphalt and into the aggregate material below. Field staff used a disposable stainless-steel spoon to collect the asphalt sample from the two drilled holes into laboratory-provided sample jars. The asphalt sample is a composite of the asphalt profile and is representative of materials to be stockpiled during construction activities.

Asphalt samples were analyzed for PFAS.

2.2 Site 35 Soil Sampling

Shannon & Wilson collected 15 primary samples and two field-duplicate surface soil samples on November 13, 2021 using the methods described in our August 2020 *Revision 1 DOT&PF Statewide PFAS General Work Plan (GWP)*. Surface soil samples were collected just below vegetation, if present, and between 0.5 to 1.0 feet below ground surface. A trowel or rock hammer was used to clear vegetation and dig to the target depth. A new, disposable stainless-steel spoon was used to fill the laboratory-provided sample jars.

Surface soil samples were collected from the locations shown in Figure 4 and were analyzed for PFAS, GRO, DRO, and VOCs.

2.3 ISM Sampling

Field staff conducted ISM sampling in two areas where DOT&PF plans to stockpile excavated material related to the fencing upgrade project. Area ADQ-ISM1, located northeast of the runway, contained four decision units (DUs), and area ADQ-ISM2, located northwest of the airport runway, was designated into five DUs (Figure 5). The DUs are summarized in Exhibit 2-3.

Exhibit 2-2: Zach Thon collects a soil sample from the northern area of Site 35 adjacent to the Buskin River.

	ADQ-ISM2-05	6,750	—	

Field staff divided each DU into 30 equally sized subunits and systematically collected a subsample from each increment. The substrate at the sample areas consisted of frozen, compacted gravel. Field staff used a Bosch Rotary Drill to loosen the compacted gravel prior to sample collection and collected sample increments using a 5-gram Terra Core® sampler and stainless-steel spoon.

Increment samples from each DU were composited in a resealable bag and laboratory-supplied jars. To assess the precision of the method and overall representativeness, we collected two replicate samples from the DUs in each area, ADQ-ISM1 and ADQ-ISM2.

Exhibit 2-4: Field staff mark decision unit boundaries at ADQ-ISM1 (left), and field staff use a Terra Core® sampler to collect a sample increment of soil for GRO and VOC analysis from ADQ-ISM1.

2.4 Sample Custody, Storage, and Shipping

Field staff collected, handled, and stored samples in a manner consistent with the GWP and DEC's *Field Sampling Guidance*. Immediately after collection, the samples were placed in a designated sample cooler maintained between 0 degrees Celsius (°C) and 6 °C with ice substitute. The PFAS and DRO ISM samples were double-bagged to prevent any leakage and cross-contamination; the PFAS soil jars were stored in individual resealable plastic bags.

Shannon & Wilson maintained custody of the analytical samples until samples were shipped from Kodiak, Alaska to Eurofins TestAmerica Laboratories (Eurofins TestAmerica) in West Sacramento, California using Alaska Air Cargo's Goldstreak service. Field staff placed samples in a hard-sided cooler with a chain of custody form. Samples were packed with frozen ice substitute to maintain the proper temperature range. The coolers were sealed with custody seals on the outside of the coolers. The laboratory receipt notes custody seals were intact upon arrival to the laboratory.

Due to the remote location of Kodiak and flight delays, the samples were received by the laboratory five days after samples were shipped. The laboratory informed Shannon & Wilson that they may not be able to meet the 14-day hold time due to shipping delays and the laboratory's holiday schedule for some project samples. No data were rejected due to hold time failures. See Section C.2 in Appendix C for a discussion of affected samples.

2.5 Investigation Derived Waste

Excess soil was not generated during sampling. Decontamination fluids were discharged at least 100 feet from drainage ditches and surface water bodies at the northwest end of airport runway 11. Other investigation derived wastes included non-reusable sampling equipment, such as nitrile gloves, and were disposed of in an onsite dumpster to be transferred to the Kodiak Island Borough Landfill.

2.6 Deviations from Approved Work

In general, we conducted our services in accordance with the GWP and DEC-approved proposals, except for the following deviations.

- Several asphalt sampling locations were moved outside the airport restricted access boundary to reduce escort needs on DOT&PF staff. Final sample locations are shown in Figures 2 and 3. Samples were moved less than 10 feet from the proposed location.
- The stockpile areas identified in the September 2021 *ISM Stockpile Sampling and Analysis Plan* were comprised of compacted, frozen gravel. Field staff used the Bosch Rotary Drill to separate the frozen gravel to allow for ISM sampling.

- Equipment blank samples were collected each day for the ISM samples since reusable equipment (i.e., rotary drill bit) was introduced during soil sampling. The drill bit was decontaminated after use in each DU using phosphate-free detergent, followed by rinsing with distilled water and PFAS-free water.
- The number of DUs identified in the September 2021 *ISM Stockpile Sampling and Analysis Plan* was reduced to sample only areas that will be used for stockpiling. This change was based on conversations with local DOT&PF personnel.

3 ANALYTICAL RESULTS

Analytical samples collected for this project were submitted to Eurofins TestAmerica Laboratories in West Sacramento, California for analysis of PFAS, GRO, DRO, and VOCs, where applicable. The laboratories maintain current certifications approved by DEC Contaminated Sites to conduct the requested analyses.

Analytical results are presented in Table 1 through Table 3. ISM replicate results and statistical analyses are included in Table 4. The analytical laboratory reports and corresponding DEC Laboratory Data Review Checklists (LDRCs) are included in Appendix B. A quality assurance/quality control (QA/QC) summary of the analytical results is provided in Appendix C.

Soil and asphalt results were compared to the migration to groundwater cleanup levels listed in 18 AAC 75 *Table B1. Method Two- Soil Cleanup Levels and Table B2. Method Two- Petroleum Hydrocarbon Soil Cleanup Levels- Over 40-inch Zone*.

3.1 Asphalt Analytical Results

PFOS was the primary PFAS compound detected in the asphalt and soil samples. PFOS was detected at concentrations exceeding the DEC Cleanup Level of 3.0 micrograms per kilogram ($\mu\text{g}/\text{kg}$) in samples *ADQ-AC11-01* and *ADQ-AC11-02* at 26 $\mu\text{g}/\text{kg}$ and 5.0 $\mu\text{g}/\text{kg}$, respectively.

PFOS was detected above the detection limit but below the DEC Cleanup Level in samples *ADQ-AC3-3-02*, *ADQ-AC3-04*, *ADQ-AC3-05*, *ADQ-AC3-06*, *ADQ-AC3-7* and field-duplicate sample *ADQ-AC3-107*, and *ADQ-AC6-01*.

PFAS were not detected in the following samples: *ADQ-AC3-01*, *ADQ-AC3-03*, *ADQ-AC6-02*, *ADQ-AC7-01* and field-duplicate sample *ADQ-AC7-101*, and *ADQ-AC7-02*.

3.2 Site 35 Analytical Results

GRO, DRO, and VOCs were detected below the associated DEC Cleanup Level in all samples with the following exceptions:

- 1,2,3-trichloropropane was detected above the DEC Cleanup Level in samples *ADQ-Site35-05* and *ADQ-Site35-07*; and
- 1,2-dibromomethane was detected above the DEC Cleanup Level in sample *ADQ-Site35-14*.

Multiple VOCs had elevated detection limits above the associated DEC Cleanup Levels, including 1,2,3-trichloropropane and 1,2-dibromomethane in other project samples.

PFOS and PFOA are the primary PFAS detected in the Site 35 soil samples. PFOS was detected in each surface-soil sample collected from Site 35.

PFOS was detected at concentrations exceeding the DEC Cleanup Level of 3.0 µg/kg in samples *ADQ-Site35-12*, *ADQ-Site35-13*, and field duplicate sample *ADQ-Site35-113*. PFOA was detected at a concentration exceeding the DEC Cleanup Level of 1.7 µg/kg in sample *ADQ-Site35-13*.

3.3 ISM Stockpile Base ISM Analytical Results

GRO, DRO, and VOCs were detected below the associated DEC Cleanup Levels in each ISM sample with the following exceptions:

- DRO was detected at concentrations exceeding the DEC Cleanup Level of 230 mg/kg in ISM samples *ADQ-ISM1-01*, *ADQ-ISM1-02*, and *ADQ-ISM1-04*.

PFOS and PFOA were the primary PFAS detected. No PFAS were detected above the associated DEC Cleanup Levels. PFAS were not detected above laboratory limits with exception of samples *ADQ-ISM1-03* and *ADQ-ISM1-04*, where multiple PFAS were detected at estimated concentrations.

4 ISM STATISTICAL ANALYSES

ISM replicate results and statistical analyses are presented in Table 4. The associated equations are described in our September 3, 2021 Proposal *Kodiak Airport Baseline PFAS Stockpile Sampling and Analysis Plan, Kodiak, Alaska*.

4.1 Arithmetic Mean and Standard Deviation

The arithmetic mean (μ) and standard deviation (SD) for the replicate ISM samples are presented in Table 4. These values can be calculated for analytes where at least one replicate sample result was detected above the reporting limit. The laboratory reporting limit was substituted for the non-detect result for the calculations, where detectable results are not reported. The arithmetic mean represents the average concentration of target analyte in the DU, and the SD is a measure of the ISM replicate variance.

4.2 Data Distribution

The coefficient of variance (CV) is a statistical measure of the spread of variance around the arithmetic mean. If the CV for a given analyte is between 0 and 1.5, then the analyte is assumed to be normally distributed. CV values, where calculable, were less than 1.5. We consider the detected analytical results to be normally distributed.

4.3 Relative Standard Deviation

The overall representativeness of ISM sample results is evaluated by calculating the amount of agreement between the reported concentrations of replicate samples. The agreement between the results is represented by the relative standard deviation (RSD). The RSD is given as a percentage and calculated from the arithmetic mean and standard deviation of the data set.

DEC requires the RSD be 30% or less before the data can be considered sufficiently precise. RSDs can only be calculated where one or more of the target analytes in the replicates were detected. The laboratory reporting limit was substituted for the non-detect result for the calculations.

The RSD was below 30% for the following analytes:

- GRO in sample *ADQ-ISM2-02*; and
- DRO in samples *ADQ-ISM1-01* and *ADQ-ISM2-02*.

We consider the GRO result in sample *ADQ-ISM2-02* and DRO result in samples *ADQ-ISM1-01* and *ADQ-ISM2-02* to be precise and a robust estimate of the actual mean concentration in associated DU.

The RSD was above 30% for the following analytes:

- GRO, 1,2,4-trimethylbenzene, 2-hexanone, acetone, and benzene in sample *ADQ-ISM1-01*; and

- p-xylene & m-xylene and toluene in samples *ADQ-ISM1-01* and *ADQ-ISM2-02*.

An RSD greater than 30% implies imprecision of the analytical method and/or sample non-homogeneity. We consider the analyte concentrations where the RSD was calculated above 30% to be estimated due to the imprecision at the laboratory or sample non-homogeneity.

4.4 95% Upper Confidence Limit

The DEC requires a 95-percent upper confidence limit (95% UCL) be calculated for each target analyte when replicate sample results are reported. This 95% UCL was derived from the three replicate results and represents a value for which there is a 95% probability that the true mean analyte concentration does not exceed within the sampled DU. We compared the 95% UCL for each analyte to the associated DEC Cleanup Level. These values are presented in Table 3.

4.5 ISM Statistical Summary

We consider the GRO result in sample *ADQ-ISM2-02* and DRO result in samples *ADQ-ISM1-01* and *ADQ-ISM2-02* to be representative and complete. The replicate analytical results are normally distributed and meet DEC requirements for analytical precision where analyte results were detected above the laboratory method detection limits.

An RSD greater than 30% implies imprecision of the analytical method and/or sample non-homogeneity. We consider the analyte concentrations where the RSD was calculated above 30% to be estimated due to the imprecision at the laboratory or sample non-homogeneity.

5 DISCUSSION AND RECOMMENDATIONS

The pre-construction sampling effort described in this report documents PFAS contamination and fuel-related contamination in onsite soil and asphalt at the ADQ. PFOS and PFOA were identified in several asphalt samples as well as surface-soil samples from Site 35. PFOS and/or PFOA exceeded the DEC Cleanup Level in two asphalt samples from area AC11, south of the runway by the DOT&PF Maintenance Station (Figure 3) and in two surface-soil samples from Site 35 (Figure 4). We did not observe PFAS contamination above DEC Cleanup Levels at the future stockpile locations (Figure 5).

We observed fuel-related contamination at the stockpile locations (*ADQ-ISM1*) located on the northeast side of the runway and at Site 35.

Based on the results of our pre-construction sampling, we recommend the DOT&PF:

- update the contaminated materials management plan (CMMP) to inform the construction contractor how asphalt and soil should be handled during fencing upgrades, including the handling of areas where one or more analytes that exceed DEC Cleanup Levels; and
- inform DEC of the results of this sampling event.

These recommendations are based on:

- Site conditions observed at and near the ADQ in November 2021.
- The results of testing on soil and asphalt at the ADQ.
- Shannon & Wilson's understanding of the project and information provided by DOT&PF and other members of the project team.
- The limitations and approved scope and schedule described in our approved proposals.

Sheet 1 of 1

Project No. 107431-001

Project Name: Kodiak DOT+PF PFAS
 Field activity subject: Site Preview, site 35 sampling, + Asphalt sampling
 Description of daily activities and events: _____

0730 - RLW + ZJT prep field items + pack sample coolers.
 0750 - Depart lodging. AA
 0800 - Field staff arrive @ Gate A to meet DOT+PF Crew for escort. RLW calls Airport Duty Phone. Clark from DOT provides escort.
 RLW + ZJT preview sampling locations.
 Some locations for PFAS asphalt sampling are not on airport restricted access areas.

0915 - Begin sampling Site 35: Airport security gate partitions sampling area. 4 locations "off-site", remaining locations "on-site" samples ADQ-Site35-01 to ADQ-Site35-15 + two field duplicates for analysis of PFAS, GRO, DRO, + VOCs. Clark leaves site at 1230. Dan is new escort.

1430 RLW + ZJT finish site 35 sampling. Pick up generator from DOT, ~~and~~ decon water setup, and DI water.

1530 Field staff start sampling Asphalt at AC3-Part 2 + Part 3. Sample location in proposal shows location on gravel, RLW moved location to asphalt AC3-Part 2 + 3 located "off-site" restricted access area. Sampled AE3-ADQ-AC3-02 to ADQ-AC3-07, 1 field duplicate, and 1 equipment blank sample for analysis of PFAS.

1800 Return to lodging. Unpack gear + QC samples.

Visitors on site: _____

Changes from plans/specifications and other special orders and important decisions:
Collected Asphalt samples ~~without~~ without airport escort since locations were not in restricted area, as previously discussed.

Weather conditions: 20°F - 30°F. Partly cloudy w/ wind + light snow.

Important telephone calls: Airport Duty OPS @ 0800.

Sheet 1 of 1

Project No. 107471-001

Project Name: Kodiak DOT+PF

Field activity subject: Asphalt Sampling + ISM Sampling

Description of daily activities and events:

0745 RLW + ZJT prep field equipment + depart lodging
 0815 Field staff arrive outside AK Air Cargo to sample asphalt at AC7. RLW called Airport Ops cell to inform crew of escort needs for the day.

0930 Field staff move to location AC6 to sample asphalt. Both samples collected on non-restricted access side of gate.

Asphalt sample summary for 11/14/21: ADQ-AC7-01 + duplicate ADQ-AC7-101, ADQ-AC7-02, ADQ-AC3-01, ADQ-AC6-01, ADQ-AC6-02, ADQ-ACC-EB2, ADQ-AC11-01, + ADQ-AC11-02 collected for analysis of PFAS.

1040 RLW calls airport duty ops for airport escort. Field staff collect meet w/ Josiah from DOT for escort. Sample remaining asphalt sample @ AC3-part1 and AC11.

1200 Field staff move to ISM area (Eastern-most location). Lay grid at ADQ-ISM1 for 2 decision units. New escort (Shift change)

1430 Begin sampling ADQ-ISM1-01 for analysis of PFAS, GRO, DRO, + VOCs

1600 Begin sampling ADQ-ISM1-02 for analysis of PFAS, GRO, DRO, + VOCs

↳ Prior to sampling ADQ-ISM1-01, field staff called KRF to inform her of site conditions. All ISM areas are heavily-compacted recycled asphalt or gravel. KRF advises field staff to use rotary drill to break apart substrate. Field staff + DOT return to shop to pick up generator to use drill.

1700 Finish sampling ISM-02. Pack up site. Field staff will collect duplicate + triplicate on 11/15/21.

1730 Return to the lodging + prep materials.

This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260C: The following samples were delayed in shipping and the lab received with insufficient time to run within holding time. ADQ-Site35-01 (320-82154-1), ADQ-Site35-02 (320-82154-2), ADQ-Site35-03 (320-82154-3), ADQ-Site35-04 (320-82154-4), ADQ-Site35-05 (320-82154-5), ADQ-Site35-06 (320-82154-6), ADQ-Site35-07 (320-82154-7), ADQ-Site35-08 (320-82154-8), ADQ-Site35-09 (320-82154-9), ADQ-Site35-10 (320-82154-10), ADQ-Site35-11 (320-82154-11), ADQ-Site35-12 (320-82154-12), ADQ-Site35-13 (320-82154-13), ADQ-Site35-113 (320-82154-14), ADQ-Site35-14 (320-82154-15), ADQ-Site35-15 (320-82154-16), ADQ-Site35-115 (320-82154-17) and Trip Blank 1 (320-82154-18).

Method AK101: Surrogate recovery for the following sample was outside control limits: ADQ-Site35-01 (320-82154-1). Re-extraction and/or re-analysis was performed and surrogate recovery was outside control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method AK102 & 103: The following samples were diluted due to the abundance of non-target analytes: ADQ-Site35-11 (320-82154-11) and ADQ-Site35-12 (320-82154-12). Elevated reporting limits (RLs) are provided.

Method AK102 & 103: The following sample was diluted due to the abundance of non-target analytes: ADQ-Site35-07 (320-82154-7). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method AK102 & 103: Surrogate recovery for the following samples were outside control limits: ADQ-Site35-01 (320-82154-1), ADQ-Site35-02 (320-82154-2), ADQ-Site35-11 (320-82154-11) and ADQ-Site35-13 (320-82154-13). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method AK102 & 103: The method blank for preparation batch 320-545524 and analytical batch 320-550005 contained DRO (nC10-<nC25) above the method detection limit. This target analyte concentration was less than half the reporting limit (1/2RL); therefore, re-analysis of samples was not performed.

Method AK102 & 103: The Diesel Range Organics (DRO), C10-C25, concentration reported for the following samples is partially due to the presence of discrete peaks: ADQ-Site35-04 (320-82154-4), ADQ-Site35-08 (320-82154-8), ADQ-Site35-14 (320-82154-15), ADQ-Site35-15 (320-82154-16) and ADQ-Site35-115 (320-82154-17).

Method AK102 & 103: The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: ADQ-Site35-02 (320-82154-2), ADQ-Site35-03 (320-82154-3), ADQ-Site35-04 (320-82154-4), ADQ-Site35-05 (320-82154-5), ADQ-Site35-06 (320-82154-6), ADQ-Site35-07 (320-82154-7), ADQ-Site35-09 (320-82154-9), ADQ-Site35-10 (320-82154-10), ADQ-Site35-11 (320-82154-11), ADQ-Site35-12 (320-82154-12) and ADQ-Site35-113 (320-82154-14).

Method 8011: The %RPD between the primary and confirmation column / detector exceeded 40% for Ethylene Dibromide for the following sample: ADQ-Site35-13 (320-82154-13). The lower value has been reported and qualified in accordance with the laboratory's SOP.

Method 8011: The %RPD between the primary and confirmation column / detector exceeded 40% for 1,2,3-Trichloropropane for the following sample: ADQ-Site35-07 (320-82154-7). The lower value has been reported and qualified in accordance with the laboratory's SOP.

Method 8011: The following samples were analyzed outside of analytical holding time due to received out of hold: ADQ-Site35-01 (320-82154-1), ADQ-Site35-02 (320-82154-2), ADQ-Site35-03 (320-82154-3), ADQ-Site35-04 (320-82154-4), ADQ-Site35-05 (320-82154-5), ADQ-Site35-06 (320-82154-6), ADQ-Site35-07 (320-82154-7), ADQ-Site35-08 (320-82154-8), ADQ-Site35-09 (320-82154-9), ADQ-Site35-10 (320-82154-10), ADQ-Site35-11 (320-82154-11), ADQ-Site35-12 (320-82154-12), ADQ-Site35-13 (320-82154-13), ADQ-Site35-113 (320-82154-14), ADQ-Site35-14 (320-82154-15), ADQ-Site35-15 (320-82154-16), ADQ-Site35-115 (320-82154-17) and Trip Blank 1 (320-82154-18).

Method 8011: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 280-559547. LCSD was run to ensure lab precision.

Method 8011: The samples provided were 5 mL of methanol. This method normally uses 10g of soil as the sample volume. As TSO instructed the 5 mL of sample were spiked with the normal spikes of surrogate and then 2 mL of hexane were added to the sample vial followed by 15 mL of reagent water. This volume was then placed on the auto shaker for 2 minutes. Most of the samples had bad emulsions and were then put into the centrifuge for 5 minutes. This allowed the hexane to raise to the top of the sample. The hexane was then extracted as normal. The resulting data will be qualified. ADQ-Site35-01 (320-82154-1), ADQ-Site35-02 (320-82154-2), ADQ-Site35-03 (320-82154-3), ADQ-Site35-04 (320-82154-4), ADQ-Site35-05 (320-82154-5), ADQ-Site35-06 (320-82154-6), ADQ-Site35-07 (320-82154-7), ADQ-Site35-08 (320-82154-8), ADQ-Site35-09 (320-82154-9), ADQ-Site35-10 (320-82154-10), ADQ-Site35-11 (320-82154-11), ADQ-Site35-12 (320-82154-12), ADQ-Site35-13 (320-82154-13), ADQ-Site35-113 (320-82154-14), ADQ-Site35-14 (320-82154-15), ADQ-Site35-15 (320-82154-16), ADQ-Site35-115 (320-82154-17) and Trip Blank 1 (320-82154-18)

Method 8011: MB, LCS, LCSD were prepared as SOP states due to the provided blank not having enough volume for all three QC. ADQ-Site35-01 (320-82154-1), ADQ-Site35-02 (320-82154-2), ADQ-Site35-03 (320-82154-3), ADQ-Site35-04 (320-82154-4), ADQ-Site35-05 (320-82154-5), ADQ-Site35-06 (320-82154-6), ADQ-Site35-07 (320-82154-7), ADQ-Site35-08 (320-82154-8), ADQ-Site35-09 (320-82154-9), ADQ-Site35-10 (320-82154-10), ADQ-Site35-11 (320-82154-11), ADQ-Site35-12 (320-82154-12), ADQ-Site35-13 (320-82154-13), ADQ-Site35-113 (320-82154-14), ADQ-Site35-14 (320-82154-15), ADQ-Site35-15 (320-82154-16), ADQ-Site35-115 (320-82154-17) and Trip Blank 1 (320-82154-18)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

LCMS

Method EPA 537(Mod): Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: ADQ-Site35-09 (320-82154-9), ADQ-Site35-11 (320-82154-11), ADQ-Site35-115 (320-82154-17) and (320-82154-A-17-C MSD). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method EPA 537(Mod): The "I" qualifier means the transition mass ratio for the indicated analyte was below the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. However, analyst judgment was used to positively identify the analyte.

Method EPA 537(Mod): Results for sample ADQ-Site35-13 (320-82154-13) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits

1. Laboratory

a. Did an ADEC CS approved laboratory receive and perform all of the submitted sample analyses?

Yes No N/A Comments:

The Eurofins Sacramento, CA laboratory has been approved by the DEC CS program for the analysis of 32 per- and poly-fluoroalkyl substances (PFAS) by LCMSMS compliant with QSM 5.3 Table B-15.

b. If the samples were transferred to another “network” laboratory or sub-contracted to an alternate laboratory, was the laboratory performing the analyses ADEC CS approved?

Yes No N/A Comments:

2. Chain of Custody (CoC)

a. CoC information completed, signed, and dated (including released/received by)?

Yes No N/A Comments:

The CoC is missing a “received by” signature. It appears the receiver signed in the “relinquished by” section. We do not consider the project sample results to be affected.

b. Discrepancies, errors, or QC failures identified by the lab?

Yes No N/A Comments:

Method AK102 & 103: The Diesel Range Organics (DRO), C10-C25, concentration reported for the following samples is partially due to the presence of discrete peaks: *ADQ-Site35-04* (320-82154-4), *ADQ-Site35-08* (320-82154-8), *ADQ-Site35-14* (320-82154-15), *ADQ-Site35-15* (320-82154-16) and *ADQ-Site35-115* (320-82154-17).

Method AK102 & 103: The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: *ADQ-Site35-02* (320-82154-2), *ADQ-Site35-03* (320-82154-3), *ADQ-Site35-04* (320-82154-4), *ADQ-Site35-05* (320-82154-5), *ADQ-Site35-06* (320-82154-6), *ADQ-Site35-07* (320-82154-7), *ADQ-Site35-09* (320-82154-9), *ADQ-Site35-10* (320-82154-10), *ADQ-Site35-11* (320-82154-11), *ADQ-Site35-12* (320-82154-12) and *ADQ-Site35-113* (320-82154-14).

Method 8011: MB, LCS, LCSD were prepared as SOP states due to the provided blank not having enough volume for all three QC. *ADQ-Site35-01* (320-82154-1), *ADQ-Site35-02* (320-82154-2), *ADQ-Site35-03* (320-82154-3), *ADQ-Site35-04* (320-82154-4), *ADQ-Site35-05* (320-82154-5), *ADQ-Site35-06* (320-82154-6), *ADQ-Site35-07* (320-82154-7), *ADQ-Site35-08* (320-82154-8), *ADQ-Site35-09* (320-82154-9), *ADQ-Site35-10* (320-82154-10), *ADQ-Site35-11* (320-82154-11), *ADQ-Site35-12* (320-82154-12), *ADQ-Site35-13* (320-82154-13), *ADQ-Site35-113* (320-82154-14), *ADQ-Site35-14* (320-82154-15), *ADQ-Site35-15* (320-82154-16), *ADQ-Site35-115* (320-82154-17) and *Trip Blank 1* (320-82154-18)

Method EPA 537(Mod): Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the following samples: *ADQ-Site35-09* (320-82154-9), *ADQ-Site35-11* (320-82154-11), *ADQ-Site35-115* (320-82154-17) and (320-82154-A-17-C MSD). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method EPA 537(Mod): The "I" qualifier means the transition mass ratio for the indicated analyte was below the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. However, analyst judgment was used to positively identify the analyte.

Method EPA 537(Mod): Results for sample *ADQ-Site35-13* (320-82154-13) were reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

Method SHAKE: The following samples were yellow after extraction/final volume: *ADQ-Site35-07* (320-82154-7) and *ADQ-Site35-11* (320-82154-11). preparation batch 320-545891

Method 8260C: Internal standard (ISTD) response for TBA-d9 for the following samples in analytical batch 320-547871 was outside acceptance criteria: *ADQ-Site35-02* (320-82154-2), *ADQ-Site35-03* (320-82154-3), *ADQ-Site35-04* (320-82154-4), *ADQ-Site35-05* (320-82154-5), *ADQ-Site35-08* (320-82154-8), *ADQ-Site35-09* (320-82154-9), *ADQ-Site35-10* (320-82154-10), *ADQ-Site35-11* (320-82154-11), *ADQ-Site35-12* (320-82154-12), *ADQ-Site35-13* (320-82154-13), *ADQ-Site35-113* (320-82154-14), *ADQ-Site35-14* (320-82154-15), *ADQ-Site35-15* (320-82154-16), *ADQ-Site35-115* (320-82154-17), *Trip Blank 1* (320-82154-18), (LCS 320-545528/2-A), (LCSD 320-545528/3-A) and (MB 320-545528/1-A). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method AK101: Surrogate recovery for the following sample was outside control limits: *ADQ-Site35-01* (320-82154-1). Re-extraction and/or re-analysis was performed and surrogate recovery was outside control limits.

Method AK102 & 103: The following samples were diluted due to the abundance of non-target analytes: *ADQ-Site35-11* (320-82154-11) and *ADQ-Site35-12* (320-82154-12). Elevated reporting limits (RLs) are provided.

Method AK102 & 103: The following sample was diluted due to the abundance of non-target analytes: *ADQ-Site35-07* (320-82154-7). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8011: The %RPD between the primary and confirmation column / detector exceeded 40% for Ethylene Dibromide for the following sample: *ADQ-Site35-13* (320-82154-13). The lower value has been reported and qualified in accordance with the laboratory's SOP.

Method 8011: The %RPD between the primary and confirmation column / detector exceeded 40% for 1,2,3-Trichloropropane for the following sample: *ADQ-Site35-07* (320-82154-7). The lower value has been reported and qualified in accordance with the laboratory's SOP.

Method 8011: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 280-559547. LCSD was run to ensure lab precision.

Method 8011: The samples provided were 5 mL of methanol. This method normally uses 10g of soil as the sample volume. As TSO instructed the 5 mL of sample were spiked with the normal spikes of surrogate and then 2 mL of hexane were added to the sample vial followed by 15 mL of reagent water. This volume was then placed on the auto shaker for 2 minutes. Most of the samples had bad emulsions and were then put into the centrifuge for 5 minutes. This allowed the hexane to raise to the top of the sample. The hexane was then extracted as normal. The resulting data will be qualified.

d. What is the effect on data quality/usability according to the case narrative?

Comments:

Analytes assigned the ‘I’ qualifier by the laboratory are affected by transition mass ratio failures and quantified manually by the analyst. The case narrative states that these results may have some degree of uncertainty. We consider the results to be estimated, flagged with a “J” in the analytical database.

Method AK102 and 103 have elevated RL for samples *ADQ-Site35-11*, *ADQ-Site35-12*, and *ADQ-Site35-07*.

Please see the following sections for our assessment of the data quality associated with the failures listed above.

5. Samples Results

Yes No N/A Comments:

b. All applicable holding times met?

Yes No N/A Comments:

The samples analyzed by Method 8011, Method 8260, and Method 8260C were collected and prepared outside of the laboratory holding time due to shipping delays. iii. Do the sample results with failed surrogate/IDA recoveries have data flags? If so, are the data flags clearly defined?

Yes No N/A Comments:

The non-detect GRO result for the sample listed below is considered estimated and flagged “UJ” for reporting purposes.

- GRO: *ADQ-Site35-01*

The following samples have already been flagged “UB” due to a DRO method blank detection; no further flagging has been applied for the below limit recovery of o-terphenyl.

- DRO: *ADQ-Site35-01* and *ADQ-Site35-02*

The following samples have been flagged as biased high due to a method blank detection. They are also considered biased low due to surrogate recovery. Therefore, we consider the DRO results for the following samples to be estimated, flagged “J” in the associated data table.

- DRO: *ADQ-Site35-11* and *ADQ-Site35-13*

The 8011 sample results associated with *ADQ-Site35-06* were non-detect and therefore not affected by the above limit surrogate recovery. No flags are required.

The DRO result for the following sample is considered biased high, flagged with a “JH” due to the above limit surrogate recovery.

- DRO: *ADQ-Site35-07*

The following samples and analytes are affected by the IDA recovery failure. Results are considered estimated, flagged with a “UJ” (non-detect) in the analytical data table.

Narrative

Job Narrative 320-82155-1

Receipt

The samples were received on 11/23/2021 4:45 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.4° C.

LCMS

Method EPA 537(Mod): The Isotope Dilution Analyte (IDA) recovery associated with the following samples is below the method recommended limit: ADQ-AC3-05 (320-82155-4), ADQ-AC3-02 (320-82155-8), ADQ-AC3-01 (320-82155-9), ADQ-AC7-101 (320-82155-11) and ADQ-AC7-02 (320-82155-12). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples.

Method EPA 537(Mod): The "I" qualifier means the transition mass ratio for the indicated analyte was below the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. However, analyst judgment was used to positively identify the analyte.

Method EPA 537(Mod): The matrix spike duplicate (MSD) recovery for Perfluorooctanesulfonic acid (PFOS) preparation batch 320-545562 and analytical batch 320-546590 was outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method EPA 537(Mod): Results for sample ADQ-AC11-01 (320-82155-16) was reported from the analysis of a diluted extract due to high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 14 days. The following samples in analytical batch 320-546536 were prepared and/or analyzed outside this time period: ADQ-AC3-06 (320-82155-1), ADQ-AC3-07 (320-82155-2), ADQ-AC3-107 (320-82155-3), ADQ-AC3-05 (320-82155-4), ADQ-AC3-04 (320-82155-5), ADQ-AC3-03 (320-82155-6), ADQ-AC3-02 (320-82155-8), ADQ-AC3-01 (320-82155-9), ADQ-AC7-01 (320-82155-10), ADQ-AC7-101 (320-82155-11), ADQ-AC7-02 (320-82155-12), ADQ-AC6-01 (320-82155-13), ADQ-AC6-02 (320-82155-14), ADQ-AC11-01 (320-82155-16) and ADQ-AC11-02 (320-82155-17).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 3535: The following samples were received in a plastic 4 oz soils jar: ADQ-AC3-03-EB1 (320-82155-7) and ADQ-AC6-EB2 (320-82155-15).
preparation batch 320-545634

Method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-545634.

Method 3535: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: ADQ-AC3-03-EB1 (320-82155-7) and ADQ-AC6-EB2 (320-82155-15).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

b. Discrepancies, errors, or QC failures identified by the lab?

Yes No N/A Comments:

Method EPA 537(Mod): The recoveries of one or more isotope dilution analytes (IDAs) associated with the samples *ADQ-AC3-05*, *ADQ-AC3-02*, *ADQ-AC3-01*, *ADQ-AC7-101*, and *ADQ-AC7-02* were below the method recommended limit. Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples.

Method EPA 537(Mod): The 'I' qualifier means the transition mass ratio for the indicated analyte was below the established ratio limits. The qualitative identification of the analyte has some degree of uncertainty. However, analyst judgment was used to positively identify the analyte.

Method EPA 537(Mod): The matrix spike duplicate (MSD) reported with preparation batch 320-545562 exhibited a recovery for perfluorooctanesulfonic acid (PFOS) which was outside of laboratory control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method EPA 537(Mod): The results for sample *ADQ-AC11-01* were reported from the analysis of a diluted extract. The sample was diluted due to a high concentration of the target analyte in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 14 days. The following samples in analytical batch 320-546536 were prepared and/or analyzed outside this time period: *ADQ-AC3-06*, *ADQ-AC3-07*, *ADQ-AC3-107*, *ADQ-AC3-05*, *ADQ-AC3-04*, *ADQ-AC3-03*, *ADQ-AC3-02*, *ADQ-AC3-01*, *ADQ-AC7-01*, *ADQ-AC7-101*, *ADQ-AC7-02*, *ADQ-AC6-01*, *ADQ-AC6-02*, *ADQ-AC11-01*, and *ADQ-AC11-02*.

Method 3535: The samples *ADQ-AC3-03-EB1* and *ADQ-AC6-EB2* were received in a plastic 4 oz soil jars.

Method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-545634.

Method 3535: Elevated reporting limits are provided for the samples *ADQ-AC3-03-EB1* and *ADQ-AC6-EB2* due to insufficient sample provided for preparation.

c. Were all corrective actions documented?

Yes No N/A Comments:

Sample *ADQ-AC11-01* was diluted to bring the concentration of a target PFAS within the instrument's calibration range. A dilution factor was applied to the internal standard area counts.

d. What is the effect on data quality/usability according to the case narrative?

Comments:

Analytes assigned the 'I' qualifier by the laboratory are affected by transition mass ratio failures and quantified manually by the analyst. The case narrative states that these results may have some degree of uncertainty.

The equipment blank samples *ADQ-AC3-03-EB1* and *ADQ-AC6-EB2* have elevated reporting limits.

Please see the following sections for our assessment of the data quality.

5. Samples Results

a. Correct analyses performed/reported as requested on COC?

Yes No N/A Comments:

b. All applicable holding times met?

Yes No N/A Comments:

The percent moisture analysis of the field samples was prepared and/or analyzed outside of the laboratory's default 14-day holding time. However, the reference method does not specify a holding time for this analysis. We note the moisture analysis was completed 15 to 16 days past collection.

Yes No N/A Comments:

Only asphalt and liquid samples were submitted for this work order. Asphalt samples were reported as a dry weight.

d. Are the reported LOQs less than the Cleanup Level or the minimum required detection level for the project?

ii. Metals/Inorganics – one MS and one MSD reported per matrix, analysis and 20 samples?

Yes No N/A Comments:

Metals/Inorganics analyses were not requested for this work order.

iv. Precision – All relative percent differences (RPD) reported and less than method or laboratory limits and project specified objectives, if applicable? RPD reported from MS/MSD, and or sample/sample duplicate.

Yes No N/A Comments:

v. If %R or RPD is outside of acceptable limits, what samples are affected?

Comments:

The MSD was prepared from the field sample *ADQ-AC11-02*. However, the PFOS spike added to the matrix was low relative to the native concentration in the parent sample. The resulting uncertainty may render the PFOS recovery unrepresentative of actual method performance. Potential adverse matrix effects on method recovery have therefore not been demonstrated. We do not consider the results to be affected.

Method AK102 & 103: The method blank for preparation batch 320-546878 and analytical batch 320-550444 contained DRO (nC10-<nC25) above the method detection limit. This target analyte concentration was less than half the reporting limit (1/2RL); therefore, re-analysis of samples was not performed.

Method AK102 & 103: The following samples were diluted due to abundance of target analytes: ADQ-ISM1-01 (320-82156-1), ADQ-ISM1-101 (320-82156-2), ADQ-ISM1-201 (320-82156-3), ADQ-ISM1-02 (320-82156-4), ADQ-ISM1-03 (320-82156-5) and ADQ-ISM1-04 (320-82156-6). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method AK102 & 103: The following samples were diluted due to the abundance of target analytes : (320-82156-G-1-I MS) and (320-82156-G-1-J MSD). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method AK102 & 103: The following sample was diluted due to the abundance of non-target analytes: ADQ-ISM2-01 (320-82156-7). Elevated reporting limits (RLs) are provided.

Method AK102 & 103: The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: ADQ-ISM1-01 (320-82156-1), ADQ-ISM1-101 (320-82156-2), ADQ-ISM1-201 (320-82156-3), ADQ-ISM1-02 (320-82156-4), ADQ-ISM1-03 (320-82156-5), ADQ-ISM1-04 (320-82156-6), ADQ-ISM2-01 (320-82156-7), ADQ-ISM2-02 (320-82156-8), ADQ-ISM2-102 (320-82156-9), ADQ-ISM2-202 (320-82156-10), ADQ-ISM2-03 (320-82156-11), ADQ-ISM2-04 (320-82156-12) and ADQ-ISM2-05 (320-82156-13).

Method AK102 & 103: Surrogate recovery for the following samples were outside control limits: ADQ-ISM2-102 (320-82156-9) and ADQ-ISM2-03 (320-82156-11). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method AK102 & 103: The Diesel Range Organics (DRO), C10-C25, concentration reported for the following samples is partially due to the presence of discrete peaks: ADQ-ISM2-02 (320-82156-8) and ADQ-ISM2-102 (320-82156-9).

Method 8011: The following samples were analyzed outside of analytical holding time due to samples received out of hold: ADQ-ISM1-01 (320-82156-1), ADQ-ISM1-101 (320-82156-2), ADQ-ISM1-201 (320-82156-3), ADQ-ISM1-02 (320-82156-4), ADQ-ISM1-03 (320-82156-5), ADQ-ISM1-04 (320-82156-6), ADQ-ISM2-01 (320-82156-7), ADQ-ISM2-02 (320-82156-8), ADQ-ISM2-102 (320-82156-9), ADQ-ISM2-202 (320-82156-10), ADQ-ISM2-03 (320-82156-11), ADQ-ISM2-04 (320-82156-12), ADQ-ISM2-05 (320-82156-13), Trip Blank 2 (320-82156-14), Trip Blank 3 (320-82156-15), Trip Blank 4 (320-82156-16) and Trip Blank 5 (320-82156-17).

Method 8011: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 280-559548. A LCSD was run to ensure lab precision.

Method 8011: The samples provided were 5 mL of methanol. This method normally uses 10g of soil as the sample volume. As TSO instructed the 5 mL of sample were spiked with the normal spikes of surrogate and then 2 mL of hexane were added to the sample vial followed by 15 mL of reagent water. This volume was then placed on the auto shaker for 2 minutes. Most of the samples had bad emulsions and were then put into the centrifuge for 5 minutes. this allowed the hexane to raise to the top of the sample. The hexane was then extracted as normal. The resulting data will be qualified. ADQ-ISM1-01 (320-82156-1), ADQ-ISM1-101 (320-82156-2), ADQ-ISM1-201 (320-82156-3), ADQ-ISM1-02 (320-82156-4), ADQ-ISM1-03 (320-82156-5), ADQ-ISM1-04 (320-82156-6), ADQ-ISM2-01 (320-82156-7), ADQ-ISM2-02 (320-82156-8), ADQ-ISM2-102 (320-82156-9), ADQ-ISM2-202 (320-82156-10), ADQ-ISM2-03 (320-82156-11), ADQ-ISM2-04 (320-82156-12), ADQ-ISM2-05 (320-82156-13), Trip Blank 2 (320-82156-14), Trip Blank 3 (320-82156-15), Trip Blank 4 (320-82156-16) and Trip Blank 5 (320-82156-17)

Method 8011: MB, LCS, LCSD were prepared as SOP states due to the provided blank not having enough volume for all three QC. ADQ-ISM1-01 (320-82156-1), ADQ-ISM1-101 (320-82156-2), ADQ-ISM1-201 (320-82156-3), ADQ-ISM1-02 (320-82156-4), ADQ-ISM1-03 (320-82156-5), ADQ-ISM1-04 (320-82156-6), ADQ-ISM2-01 (320-82156-7), ADQ-ISM2-02 (320-82156-8), ADQ-ISM2-102 (320-82156-9), ADQ-ISM2-202 (320-82156-10), ADQ-ISM2-03 (320-82156-11), ADQ-ISM2-04 (320-82156-12), ADQ-ISM2-05 (320-82156-13), Trip Blank 2 (320-82156-14), Trip Blank 3 (320-82156-15), Trip Blank 4 (320-82156-16) and Trip Blank 5 (320-82156-17)

LCMS

Method EPA 537(Mod): Results for samples ADQ-ISM1-01 (320-82156-1), ADQ-ISM1-101 (320-82156-2), ADQ-ISM1-201 (320-82156-3), ADQ-ISM1-02 (320-82156-4), (320-82156-G-1-L MS) and (320-82156-G-1-M MSD) were reported from the analysis of a diluted extract due to effects of the sample matrix in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits

Method EPA 537(Mod): The matrix spike (MS) recoveries for preparation batch 320-545596 and 320-547064 and analytical batch 320-548024 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method EPA 537(Mod): The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit: ADQ-ISM2-02 (320-82156-8). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample(s).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 14 days. The following samples in preparation batch 320-545579 and analytical batch 320-546537 were prepared and/or analyzed outside this time period: ADQ-ISM1-01 (320-82156-1) and ADQ-ISM1-02 (320-82156-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 3535: The following samples were received in 4 oz soil jar bottle: ADQ-ISM1-EB1 (320-82156-18), ADQ-ISM2-EB1 (320-82156-19), ADQ-ISM2-EB2 (320-82156-20) and ADQ-ISM2-EB3 (320-82156-21). The samples were transferred into a new 250 mL bottle. After transferring into a new container, the samples were fortified with IDA then extracted.
preparation batch 320-545627

Method 3535: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: ADQ-ISM1-EB1 (320-82156-18), ADQ-ISM2-EB1 (320-82156-19), ADQ-ISM2-EB2 (320-82156-20) and ADQ-ISM2-EB3 (320-82156-21).
preparation batch 320-545627

Method SHAKE: The following samples were yellow after extraction/final volume: ADQ-ISM1-01 (320-82156-1), ADQ-ISM1-101 (320-82156-2), ADQ-ISM1-201 (320-82156-3), ADQ-ISM1-02 (320-82156-4), (320-82156-G-1-F MS) and (320-82156-G-1-G MSD)
preparation batch 320-545596 and 320-547064

Method SHAKE: The following samples were prepared outside of preparation holding time due to being logged past holding time: ADQ-ISM1-01 (320-82156-1), ADQ-ISM1-101 (320-82156-2), ADQ-ISM1-201 (320-82156-3), ADQ-ISM1-02 (320-82156-4), ADQ-ISM1-03 (320-82156-5), ADQ-ISM1-04 (320-82156-6), (320-82156-G-1-F MS) and (320-82156-G-1-G MSD).
preparation batch 320-545596 and 320-547064

Method AK102: The following samples were prepared outside of preparation holding time due to the samples being received after the hold time expired: ADQ-ISM1-01 (320-82156-1), ADQ-ISM1-101 (320-82156-2), ADQ-ISM1-201 (320-82156-3), ADQ-ISM1-02 (320-82156-4), ADQ-ISM1-03 (320-82156-5), ADQ-ISM1-04 (320-82156-6), (320-82156-G-1-C MS) and (320-82156-G-1-D MSD). Samples are associated with method AK102_P_Solids AK102_103 solids in preparation batch 320-545596 and 320-546878.

Method AK102: Due to the matrix, the following samples could not be concentrated to the final method required volume: 3mL. They were concentrated to final volume of 5mL. The reporting limits (RLs) are elevated proportionately for method AK102_103 solid in preparation batch 320-545596 and 320-546878.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

- Method Moisture: The reference method does not list a specific holding time for this procedure; therefore, the laboratory defaults to an in-house holding time of 14 days. The following samples in preparation batch 320-545579 and analytical batch 320-546537 were prepared and/or analyzed outside this time period: *ADQ-ISM1-01* (320-82156-1) and *ADQ-ISM1-02* (320-82156-4).
- Method SHAKE: The following samples were prepared outside of preparation holding time due to being logged past holding time: *ADQ-ISM1-01* (320-82156-1), *ADQ-ISM1-101* (320-82156-2), *ADQ-ISM1-201* (320-82156-3), *ADQ-ISM1-02* (320-82156-4), *ADQ-ISM1-03* (320-82156-5), *ADQ-ISM1-04* (320-82156-6), (320-82156-G-1-F MS) and (320-82156-G-1-G MSD) in preparation batch 320-545596 and 320-547064

Samples are associated with method AK102_P_Solids AK102_103 solids in preparation batch 320-545596 and 320-546878.
- Method AK102 & 103: The Diesel Range Organics (DRO), C10-C25, concentration reported for the following samples is partially due to the presence of discrete peaks: *ADQ-ISM2-02* (320-82156-8) and *ADQ-ISM2-102* (320-82156-9).

- Method 8260C: Surrogate 1,2-Dichloroethane-d4 (Surr), 4-Bromofluorobenzene (Surr) and Toluene-d8 (Surr) recovery for the following sample was outside the upper control limit: *ADQ-ISM2-04* (320-82156-12). This sample did not contain any target analytes associated with these surrogates.
- Method AK101: Surrogate recovery for the following samples were outside the upper control limit: *ADQ-ISM1-03* (320-82156-5), *ADQ-ISM2-01* (320-82156-7), *ADQ-ISM2-02* (320-82156-8) and *ADQ-ISM2-202* (320-82156-10). This sample did not contain any target analytes; therefore, re-analysis was not performed.
- Method EPA 537(Mod): The matrix spike (MS) recoveries for preparation batch 320-545596 and 320-547064 and analytical batch 320-548024 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.
- Method AK102 & 103: The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: *ADQ-ISM1-01* (320-82156-1), *ADQ-ISM1-101* (320-82156-2), *ADQ-ISM1-201* (320-82156-3), *ADQ-ISM1-02* (320-82156-4), *ADQ-ISM1-03* (320-82156-5), *ADQ-ISM1-04* (320-82156-6), *ADQ-ISM2-01* (320-82156-7), *ADQ-ISM2-02* (320-82156-8), *ADQ-ISM2-102* (320-82156-9), *ADQ-ISM2-202* (320-82156-10), *ADQ-ISM2-03* (320-82156-11), *ADQ-ISM2-04* (320-82156-12) and *ADQ-ISM2-05* (320-82156-13).
- Method EPA 537(Mod): The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit: *ADQ-ISM2-02* (320-82156-8). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample(s).
- Method SHAKE: The following samples were yellow after extraction/final volume: *ADQ-ISM1-01* (320-82156-1), *ADQ-ISM1-101* (320-82156-2), *ADQ-ISM1-201* (320-82156-3), *ADQ-ISM1-02* (320-82156-4), (320-82156-G-1-F MS) and (320-82156-G-1-G MSD) preparation batch 320-545596 and 320-547064.
- Method AK102 & 103: The following sample was diluted due to the abundance of non-target analytes: *ADQ-ISM2-01* (320-82156-7). Elevated reporting limits (RLs) are provided.
- Method 3535: Elevated reporting limits are provided for the following samples due to insufficient sample provided for preparation: *ADQ-ISM1-EB1* (320-82156-18), *ADQ-ISM2-EB1* (320-82156-19), *ADQ-ISM2-EB2* (320-82156-20) and *ADQ-ISM2-EB3* (320-82156-21) in preparation batch 320-545627
- Method 8011: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 280-559548. A LCSD was run to ensure lab precision.
- Method 8011: MB, LCS, LCSD were prepared as SOP states due to the provided blank not having enough volume for all three QC. *ADQ-ISM1-01* (320-82156-1), *ADQ-ISM1-101* (320-82156-2), *ADQ-ISM1-201* (320-82156-3), *ADQ-ISM1-02* (320-82156-4), *ADQ-ISM1-03* (320-82156-5), *ADQ-ISM1-04* (320-82156-6), *ADQ-ISM2-01* (320-82156-7), *ADQ-ISM2-02* (320-

- Method 8260C: Internal standard (ISTD) response for TBA-d9 and/or Dioxane-d8 for the following samples in analytical batch 320-548328 was outside acceptance criteria: *ADQ-ISM1-01* (320-82156-1), *ADQ-ISM1-101* (320-82156-2), *ADQ-ISM1-201* (320-82156-3), *ADQ-ISM1-02* (320-82156-4), *ADQ-ISM1-03* (320-82156-5), *ADQ-ISM1-04* (320-82156-6), *ADQ-ISM2-01* (320-82156-7), *ADQ-ISM2-02* (320-82156-8), *ADQ-ISM2-102* (320-82156-9), *ADQ-ISM2-202* (320-82156-10), *ADQ-ISM2-03* (320-82156-11), *ADQ-ISM2-04* (320-82156-12), *ADQ-ISM2-05* (320-82156-13), *Trip Blank 2* (320-82156-14), *Trip Blank 3* (320-82156-15), *Trip Blank 4* (320-82156-16), *Trip Blank 5* (320-82156-17), (LCS 320-545695/2-A), (LCSD 320-545695/3-A) and (MB 320-545695/1-A). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.
- Method 8260C: Internal standard (ISTD) response for TBA-d9 for the following sample in analytical batch 320-548756 was outside acceptance criteria: *ADQ-ISM2-04* (320-82156-12). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.
- Method AK102 & 103: The following samples were diluted due to abundance of target analytes: *ADQ-ISM1-01* (320-82156-1), *ADQ-ISM1-101* (320-82156-2), *ADQ-ISM1-201* (320-82156-3), *ADQ-ISM1-02* (320-82156-4), *ADQ-ISM1-03* (320-82156-5) and *ADQ-ISM1-04* (320-82156-6). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.
- Method AK102 & 103: The following samples were diluted due to the abundance of target analytes: (320-82156-G-1-I MS) and (320-82156-G-1-J MSD). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.
- Method AK102: Due to the matrix, the following samples could not be concentrated to the final method required volume: 3mL. They were concentrated to final volume of 5mL. The reporting limits (RLs) are elevated proportionately for method AK102_103 solid in preparation batch 320-545596 and 320-546878.
- Method 8011: The samples provided were 5 mL of methanol. This method normally uses 10g of soil as the sample volume. As TSO instructed the 5 mL of sample were spiked with the normal spikes of surrogate and then 2 mL of hexane were added to the sample vial followed by 15 mL of reagent water. This volume was then placed on the auto shaker for 2 minutes. Most of the samples had bad emulsions and were then put into the centrifuge for 5 minutes. this allowed the hexane to raise to the top of the sample. The hexane was then extracted as normal. The resulting data will be qualified. *ADQ-ISM1-01* (320-82156-1), *ADQ-ISM1-101* (320-82156-2), *ADQ-ISM1-201* (320-82156-3), *ADQ-ISM1-02* (320-82156-4), *ADQ-ISM1-03* (320-82156-5), *ADQ-ISM1-04* (320-82156-6), *ADQ-ISM2-01* (320-82156-7), *ADQ-ISM2-02* (320-82156-8), *ADQ-ISM2-102* (320-82156-9), *ADQ-ISM2-202* (320-82156-10), *ADQ-ISM2-03* (320-82156-11), *ADQ-ISM2-04* (320-82156-12), *ADQ-ISM2-05* (320-82156-13), *Trip*

- Method AK102 & 103: The method blank for preparation batch 320-546878 and analytical batch 320-550444 contained DRO (nC10-<nC25) above the method detection limit. This target analyte concentration was less than half the reporting limit (1/2RL); therefore, re-analysis of samples was not performed.
- Method EPA 537(Mod): Results for samples *ADQ-ISM1-01 (320-82156-1), ADQ-ISM1-101 (320-82156-2), ADQ-ISM1-201 (320-82156-3), ADQ-ISM1-02 (320-82156-4), (320-82156-G-1-L MS) and (320-82156-G-1-M MSD)* were reported from the analysis of a diluted extract due to effects of the sample matrix in the analysis of the undiluted extract. The dilution factor was applied to the labeled internal standard area counts and these area counts were within acceptance limits.

CONTENTS

- QA/QC Summary

QUALITY ASSURANCE / QUALITY CONTROL SUMMARY

This appendix summarizes Shannon & Wilson's review of analytical sample results for the Kodiak Airport Pre-Construction Fencing Upgrade. Laboratory QC procedures included evaluating surrogate recovery, performing continuing calibration checks, analyzing method blanks, and checking laboratory control samples to assess the accuracy and precision of the analytical methods. The laboratory reports, including case narratives describing laboratory QA results, are appended.

Shannon & Wilson reviewed three laboratory reports prepared by Eurofins TestAmerica Laboratories, Sacramento to evaluate compliance with project data quality objectives following the DEC's LDRC. These work orders are detailed in Exhibit C-1.

Exhibit C-1: Work Order Summary

Laboratory	Work Order	Sample Type	Included Analyses
Eurofins TestAmerica	320-82154-1	Soil	GRO (AK101), DRO (AK102), VOCs (SW8260C), PFAS (537.1M)
Eurofins TestAmerica	320-82155	Asphalt	PFAS (537.1M)
Eurofins TestAmerica	320-82156	Soil ISM	GRO (AK101), DRO (AK102), VOCs (SW8260C), PFAS (537.1M)

C.1 ANALYTICAL QUALITY ASSURANCE AND QUALITY CONTROL

QA/QC procedures assist in producing data of acceptable quality and reliability. Analytical results for laboratory QC samples were reviewed and a QA assessment of the data was conducted as the data were generated. The QA review procedures provided documentation of the accuracy and precision of the analytical data and confirmed that the analyses were sufficiently sensitive to detect analytes at levels below applicable DEC soil or groundwater cleanup levels and other regulatory limits, where such limits exist.

Shannon & Wilson conducted a QA/QC review of the laboratory reports containing data for this submittal. The laboratories apply the letter 'J' to a detection less than the reporting limit (RL) but greater than the detection limit; this "flagged" datum is considered an estimated concentration. Shannon & Wilson also applied a standardized set of flags to data brought into question during the review. Data flags applied to PFOS, PFOA, GRO, DRO, and VOC analytical results are described as follows. Additional details regarding data quality flags applied to the analytical results are described in the appended LDRCs.

C.2 SAMPLE HANDLING

Samples collected by Shannon & Wilson personnel were shipped in hard sided coolers with custody seals to the Eurofins TestAmerica Laboratory in West Sacramento, California via Alaska Air Cargo. Sample-receipt forms provided by the laboratories were reviewed and checked to verify samples were received in good condition and within the acceptable temperature range. The DEC considers samples received free of ice and at temperatures between 0 °C and 6 °C as acceptable. Samples were generally received in good condition and properly preserved, where required.

Chain-of-custody records were also reviewed to confirm the information was complete, custody was not breached, and samples were analyzed within the acceptable holding time. Chain-of-custody records were complete and correct.

Due to the remote location of Kodiak and additional flight delays, the samples were received by the laboratory five days after samples were shipped. The laboratory informed Shannon & Wilson that they may not be able to meet the 14-day hold time for some project samples due to shipping delays and the laboratory's holiday schedule. The samples analyzed outside of hold time as a result of shipping delays and laboratory schedule are described below:

- Work Order (WO) 320-82154-1: Samples analyzed by Methods 8011, 8260C, and 8260C-SIM.
- WO 320-82155-1: Percent moisture was prepared and/or analyzed outside the laboratory's default 14-day hold time.
- WO 320-82156-1: Multiple samples analyzed by Methods 8260C SIM, 8260C, 8011, percent moisture, method SHAKE, and AK102.

The associated LDRCs contain a full list of samples analyzed outside the hold time. Samples were analyzed within two times the holding time, and the results are considered estimated, biased low and flagged "JL" (detected) and "UJ" (non-detect). No data were rejected due to hold time failures.

C.3 ANALYTICAL SENSITIVITY

Reporting limits for regulated analytes were below DEC cleanup levels and other applicable regulatory limits for the samples included in these work orders, with exception of multiple VOCs in WOs 320-82154-1 and 320-82156-1. Analytes with elevated reporting limits above the Cleanup Level are denoted as <BOLD in the analytical table.

C.4 LABORATORY METHOD BLANKS

Laboratory method blanks (MBs) were analyzed in association with samples collected for this project to check for contributions to the analytical results possibly attributable to laboratory-based contamination. Field sample results are considered potentially impacted if they are included in the same preparatory batch as an MB exhibiting analyte detections and have corresponding detections for those analytes. Affected sample concentrations within five times (non-PFAS) or ten times (PFAS) of those reported in the MB are assumed to be false-positives and are flagged 'UB' at the sample concentration or RL, whichever is greater. For non-PFAS analyses, affected sample concentrations within ten times those reported in the MB are assumed to have a high analytical bias and are flagged 'JH'.

Laboratory method blank detections occurred in WOs 320-82154-1 and WO 320-82156-1 for DRO analysis. Analytical samples affected by the DRO laboratory MB detection are discussed in Section 6.a. of the respective LDRC.

C.5 TRIP AND EQUIPMENT BLANK SAMPLES

Trip blanks were submitted with the samples marked for volatile analyses to verify cross-contamination did not occur during sample handling and transport. Equipment blanks were submitted with the samples that were collected with reusable equipment for analysis of PFAS to verify that the sampling equipment employed did not introduce analyte contributions to the sample results.

As with MBs, field sample results are considered potentially impacted if the detected sample concentration for the analyte found in the blank sample is within five or ten times that of the blank concentration. Sample results within five times that of a blank concentration are considered not detected and flagged "UB" at the detected concentration or RL, whichever is greater.

- Toluene was detected an estimated concentration in the trip blank sample associated with WO 320-82154-1. The toluene results in samples *ADQ-Site35-05*, *ADQ-Site35-09*, *ADQ-Site35-10*, *ADQ-Site35-11*, *ADQ-Site35-12*, *ADQ-Site35-113*, *ADQ-Site35-14*, and *ADQ-Site35-15* were within five times the trip blank concentration and are considered not detected, reported as "UB" at the reporting limit.
- Perfluorobutanesulfonic acid (PFBS) was detected at an estimated concentration in the equipment blank sample *ADQ-AC3-03-EB1* associated with WO 320-82155. The sample collected on the same day did contain detectable concentrations of PFBS and is not affected by the equipment blank detection.

C.6 METHOD ACCURACY AND PRECISION

To evaluate the accuracy and precision of the analytical methods, the laboratory analyzed QC samples for each preparatory batch. These QC samples consist of laboratory control samples (LCS) and LCS duplicates (LCSD), matrix spike (MS) and MS duplicates (MSD) samples. Shannon & Wilson reviewed the results of the laboratory QC samples to verify that the reported accuracy and precision were within acceptable limits. The review identified several QC failures, but none of the QC failures affected the project sample results. See the associated LDRC for additional details.

C.7 SURROGATE RECOVERY

The laboratory spiked the samples analyzed for organic constituents with a known quantity of a surrogate compound or isotope dilution analyte (IDA) similar to the target analytes. The recoveries of these surrogates or isotopes are provided with the sample results in the associated laboratory reports. Shannon & Wilson reviewed the provided surrogate and isotope recovery information to verify the recoveries were within the control limits for the given method. The review identified several QC failures which affected the project sample data (see the LDRCs for details). Results affected by high recovery are flagged 'JH' while results affected by low method recovery are flagged 'JL' or 'UJ' for non-detect results. Some results are affected by multiple QC errors and have been flagged 'J' to denote conflicting biases. No data were rejected due to surrogate or IDA recovery failures.

- WO 320-82154-1:
 - The GRO result for sample *ADQ-Site35-01* was affected by surrogate recovery failure.
 - The DRO result for samples *ADQ-Site35-01*, *ADQ-Site35-02*, *ADQ-Site35-11*, *ADQ-Site35-13*, and *ADQ-Site35-07* are affected by multiple surrogate recovery failures.
 - The N-Ethyl perfluorooctane sulfonamidoacetic acid (N-EtFOSAA) result for samples *ADQ-Site35-09*, *ADQ-Site35-11*, and *ADQ-Site35-115* are affected by low IDA recovery failures.
 - The N-Methyl perfluorooctane sulfonamidoacetic acid (N-MeFOSAA) and PFBS results for sample *ADQ-Site35-11* are affected by low IDA recovery failure.
- WO 320-82155-1:
 - Multiple samples were affected by low IDA recovery for multiple PFAS analytes. See the LDRC for a list of affected samples and analytes.
- WO 320-82156-1:
 - The DRO results for samples *ADQ-ISM2-03* and *ADQ-ISM2-102* are affected by low surrogate recovery.

- The DRO results for samples *ADQ-ISM-1-01*, *ADQ-ISM-1-101*, *ADQ-ISM-1-201*, *ADQ-ISM-1-02*, and *ADQ-ISM-1-04* are affected by high surrogate recovery.
- The PFOS, 4,8-dioxa-3H-perfluorononanoic acid (ADONA), 9-chlorohexadecafluoro-3-oxanonane-1-sulfonic acid (9Cl-PF3ONS), and 11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS) results for sample *ADQ-ISM2-02* are affected by IDA recovery failures.

C.8 FIELD SAMPLE REPRESENTATIVENESS

The overall representativeness of the sample results included in WOs 320-82154-1 and 320-82155-1 was evaluated by analyzing the amount of agreement between the detected results for field duplicate samples. The agreement was determined by calculating the relative percent difference (RPD) between the detected results of the field duplicate pairs. Results affected by relative percent difference failures are flagged ‘J’ in the results summary table unless previously qualified for more serious QC issues. This was completed for non-ISM sample results.

C.8.1 ISM Sample Representativeness

The amount of agreement between the detected results of the replicate ISM samples was evaluated by calculating the relative standard deviation (RSD). The RSD is defined in Equation 1.

Equation 1: Relative Standard Deviation

Equation	Variable and Definition	
$RSD(\%) = \frac{SD}{\mu} \times 100$	RSD	Relative standard deviation
	SD	Standard deviation
	μ	Arithmetic mean of sample results for a target analyte

The RSD for each detected target analyte was compared to the project specific DQO of 30% maximum deviation. Results of replicate ISM samples, and the 95 percent upper confidence limits (95% UCLs) calculated from those replicate results, are considered estimated if the RSD exceeds this 30% threshold. Samples with RSD failures are typically flagged with a ‘J’ in the analytical table; however, all affected samples have flags from QC failures, described above, so additional qualification is not necessary. The following samples and analytes have RSD failures.

- 1,2,4-trimethylbenzene, 2-hexanone, acetone, benzene, m-xylene & p-xylene, and toluene in samples *ADQ-ISM1-01*, *ADQ-ISM1-101*, and *ADQ-ISM1-201* reported in WO 320-82156-1.

- m-xylene & p-xylene, and toluene in samples *ADQ-ISM2-02*, *ADQ-ISM2-102*, and *ADQ-ISM2-202* reported in WO 320-82156-1.

C.9 OTHER QUALIFIERS

The PFOS result for sample *ADQ-AC3-04* was affected by a transition mass ratio failure and subsequently quantified manually by the analyst. We consider this result an estimate and have applied the 'J' qualifier.

C.10 DATA QUALITY SUMMARY

By working in general accordance with the proposed scope of services, Shannon & Wilson considers the samples we collected for this project to be representative of site conditions at the locations and times they were obtained. Based on this QA review, no samples were rejected as unusable due to QC failures, surpassing the completeness goal of obtaining 85 percent useable data. In general, the quality of the analytical data for this project does not appear to have been compromised by analytical irregularities and is adequate for the purposes of this assessment. Results that are affected by QC anomalies are qualified with the appropriate flags in the analytical data tables.

Important Information

About Your Environmental Report

IMPORTANT INFORMATION

CONSULTING SERVICES ARE PERFORMED FOR SPECIFIC PURPOSES AND FOR SPECIFIC CLIENTS.

Consultants prepare reports to meet the specific needs of specific individuals. A report prepared for a civil engineer may not be adequate for a construction contractor or even another civil engineer. Unless indicated otherwise, your consultant prepared your report expressly for you and expressly for the purposes you indicated. No one other than you should apply this report for its intended purpose without first conferring with the consultant. No party should apply this report for any purpose other than that originally contemplated without first conferring with the consultant.

THE CONSULTANT'S REPORT IS BASED ON PROJECT-SPECIFIC FACTORS.

A geotechnical/environmental report is based on a subsurface exploration plan designed to consider a unique set of project-specific factors. Depending on the project, these may include the general nature of the structure and property involved; its size and configuration; its historical use and practice; the location of the structure on the site and its orientation; other improvements such as access roads, parking lots, and underground utilities; and the additional risk created by scope-of-service limitations imposed by the client. To help avoid costly problems, ask the consultant to evaluate how any factors that change subsequent to the date of the report may affect the recommendations. Unless your consultant indicates otherwise, your report should not be used (1) when the nature of the proposed project is changed (for example, if an office building will be erected instead of a parking garage, or if a refrigerated warehouse will be built instead of an unrefrigerated one, or chemicals are discovered on or near the site); (2) when the size, elevation, or configuration of the proposed project is altered; (3) when the location or orientation of the proposed project is modified; (4) when there is a change of ownership; or (5) for application to an adjacent site. Consultants cannot accept responsibility for problems that may occur if they are not consulted after factors that were considered in the development of the report have changed.

SUBSURFACE CONDITIONS CAN CHANGE.

Subsurface conditions may be affected as a result of natural processes or human activity. Because a geotechnical/environmental report is based on conditions that existed at the time of subsurface exploration, construction decisions should not be based on a report whose adequacy may have been affected by time. Ask the consultant to advise if additional tests are desirable before construction starts; for example, groundwater conditions commonly vary seasonally.

Construction operations at or adjacent to the site and natural events such as floods, earthquakes, or groundwater fluctuations may also affect subsurface conditions and, thus, the continuing adequacy of a geotechnical/environmental report. The consultant should be kept apprised of any such events and should be consulted to determine if additional tests are necessary.

MOST RECOMMENDATIONS ARE PROFESSIONAL JUDGMENTS.

Site exploration and testing identifies actual surface and subsurface conditions only at those points where samples are taken. The data were extrapolated by your consultant, who then applied judgment to render an opinion about overall subsurface conditions. The actual interface between materials may be far more gradual or abrupt than your report indicates. Actual conditions in areas not sampled may differ from those predicted in your report. While nothing can be done to prevent

such situations, you and your consultant can work together to help reduce their impacts. Retaining your consultant to observe subsurface construction operations can be particularly beneficial in this respect.

A REPORT'S CONCLUSIONS ARE PRELIMINARY.

The conclusions contained in your consultant's report are preliminary, because they must be based on the assumption that conditions revealed through selective exploratory sampling are indicative of actual conditions throughout a site. Actual subsurface conditions can be discerned only during earthwork; therefore, you should retain your consultant to observe actual conditions and to provide conclusions. Only the consultant who prepared the report is fully familiar with the background information needed to determine whether or not the report's recommendations based on those conclusions are valid and whether or not the contractor is abiding by applicable recommendations. The consultant who developed your report cannot assume responsibility or liability for the adequacy of the report's recommendations if another party is retained to observe construction.

THE CONSULTANT'S REPORT IS SUBJECT TO MISINTERPRETATION.

Costly problems can occur when other design professionals develop their plans based on misinterpretation of a geotechnical/environmental report. To help avoid these problems, the consultant should be retained to work with other project design professionals to explain relevant geotechnical, geological, hydrogeological, and environmental findings, and to review the adequacy of their plans and specifications relative to these issues.

BORING LOGS AND/OR MONITORING WELL DATA SHOULD NOT BE SEPARATED FROM THE REPORT.

Final boring logs developed by the consultant are based upon interpretation of field logs (assembled by site personnel), field test results, and laboratory and/or office evaluation of field samples and data. Only final boring logs and data are customarily included in geotechnical/environmental reports. These final logs should not, under any circumstances, be redrawn for inclusion in architectural or other design drawings, because drafters may commit errors or omissions in the transfer process.

To reduce the likelihood of boring log or monitoring well misinterpretation, contractors should be given ready access to the complete geotechnical engineering/environmental report prepared or authorized for their use. If access is provided only to the report prepared for you, you should advise contractors of the report's limitations, assuming that a contractor was not one of the specific persons for whom the report was prepared, and that developing construction cost estimates was not one of the specific purposes for which it was prepared. While a contractor may gain important knowledge from a report prepared for another party, the contractor should discuss the report with your consultant and perform the additional or alternative work believed necessary to obtain the data specifically appropriate for construction cost estimating purposes. Some clients hold the mistaken impression that simply disclaiming responsibility for the accuracy of subsurface information always insulates them from attendant liability. Providing the best available information to contractors helps prevent costly construction problems and the adversarial attitudes that aggravate them to a disproportionate scale.

READ RESPONSIBILITY CLAUSES CLOSELY.

Because geotechnical/environmental engineering is based extensively on judgment and opinion, it is far less exact than other design disciplines. This situation has resulted in wholly unwarranted claims being lodged against consultants. To help prevent this problem, consultants have developed a number of clauses for use in their contracts, reports, and other documents. These responsibility clauses are not exculpatory clauses designed to transfer the consultant's liabilities to other parties; rather, they are definitive clauses that identify where the consultant's responsibilities begin and end. Their use helps all parties involved recognize their individual responsibilities and take appropriate action. Some of these definitive clauses are likely to appear in your report, and you are encouraged to read them closely. Your consultant will be pleased to give full and frank answers to your questions.
